

Graphical User Interface (GUI) Testing - Shaadi.com

Sr.No.	GUI Description	Actual Value	Expected Value	Status/Remarks
1	Sign Up / Get Started button on Homepage	Button is clickable and navigates to registration page. Page load and redirection happen without any delay or error.	Button should be clickable and redirect user to registration page. No broken links or load errors should occur.	Passed
2	Date of Birth - Month dropdown	Dropdown does not display any list of months; box stays empty on click. Day and Year dropdowns work fine, only Month is affected.	Dropdown should display the list of months on click. All three DOB fields should behave consistently.	Failed
3	City text field	Accepts valid city name and shows an auto-suggest list correctly. Selecting a suggestion populates the field accurately.	Field should accept a valid city and show relevant suggestions. Selected suggestion should populate the field without mismatch.	Passed
4	Email ID text field - format validation	Accepts invalid/junk email format without any validation error. No '@' or domain format check is performed on submit.	Field should validate proper email format and show an error for invalid input. Submission should be blocked until a valid format is entered.	Failed
5	First Name & Last Name text fields	Continue button remains enabled even after both mandatory fields are cleared. User can proceed to the next step with blank Name fields.	Continue button should be disabled until mandatory fields are filled. Blank Name fields should trigger an inline error.	Failed
6	Email ID text field - character length	Accepts an unusually long string before '@' without truncation or warning. No maximum character limit is enforced on the field.	Field should restrict input length and show a warning for excessive length. A reasonable max-length validation should be applied.	Failed
7	OTP input field & Verify button	Accepts valid numeric OTP and proceeds to next step on Verify. Invalid or expired OTP is correctly rejected with an error.	Field should accept valid OTP and Verify button should advance registration. Invalid/expired OTP should show a clear error message.	Passed
8	Login - Email/Mobile & Password fields, Login button	Accepts valid credentials and redirects to Dashboard. Incorrect credentials show an appropriate error without any crash.	User should be logged in and redirected to Dashboard. Invalid login attempts should be handled gracefully.	Passed
9	Browse Photo button	Opens file explorer and uploads selected image (JPG, under 5MB) successfully. Uploaded photo reflects instantly on the profile page.	Button should open file browser and upload a valid image. Profile photo should update immediately after upload.	Passed
10	Search button & Apply Filter button	Displays matching profiles and filters results based on entered criteria. Filter combinations (Height, Income, Education) work correctly together.	Button should filter and display matching profiles correctly. Combined filter criteria should return accurate results.	Passed
